

These are the topics: (1) *Let's Travel Virtually*, (2) *"Urban Farming", Agriculture Solution in Urban Areas* and (3) *Sensor Activated Solar Powered Hand Washing Station* that appeared to be very relevant and helpful to me as professional teacher. The subjects under Humanities and Social Sciences which I am teaching could use the tour creator application to make my lessons more interesting and interactive. Urban farming could also be integrated by applying its simple method as part of students' performance tasks as well as helping their family to be self-sufficient in this time of pandemic. The invention of the sensor activated solar powered hand washing station could be one way of encouraging our Local Government Units and schools to support the productions of such project to benefit teachers and other personnel in preventing the spread of covid19.
